Cat's Montage!

This is a photo montage I made in Photoshop CS6. All of the images used in this montage represent me in different ways. For example, the background image shows the two basic personalities I have my right brain side and my left brain side (you might know that right brain is creativity, color, etc. and left brain is logic, order, etc.). The remaining photos add the entire idea of the image. On the right side I have several images. The cat, tree, bird, flower, and eye. These show my different interests and qualities. I love cats, trees, flowers, nature, and many different animals. On the left side, I have the same ideas. There are images showing math problems, technical drawings, and words, which show my talents. The main way I made this montage was using a low opacity eraser to make the images blend together well. I also used different effects such as pixelate (the eye) and color burn (the flower). The main element used in this image is color.

Silhouette

This is my Silhouette. This picture is really easy to take, and it can be done in many ways. You can take a picture of a cool shadow or find an object with a cool shape in it. I found a pretty colored leaf and cut out a heart shape. I held the leaf up to the sun and took a picture. I, feel like I would use this technique again because its very cool and easy to do.

-Artist: Kayla E.
